We have perfected the steps needed to extend the life of a commercial roofing system.

92% OF ROOF LEAKS

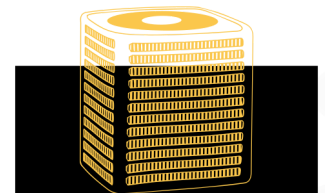

1 Drainage

Your roof's main task is to swiftly remove water. The initial step is to check for any obstructions in your drains.

2 Rooftop Units

Rooftop units are frequently maintained assets on roofs, increasing the risk of punctures and failures due to vibration, tools, and foot traffic.

3 Penetrations

The ideal roof has no penetrations but in reality, penetrations require yearly maintenance due to being hand-welded details.

4 Foot Traffic

Inspecting common walkways helps prevent issues like roof leaks caused by small obstructions like rocks in shoes.
